POST-SURGICAL COMPLICATIONS

Following the post surgical instructions recommended by your doctor will significantly reduce the risk of the following complications:

- Swelling
- Pain
- Draining from the incision or wound
- Excessive redness or irritation
- Not eating (within 24 hours)
- Fever

Please be aware that despite your best efforts (and ours), complications may still arise. Depending on the severity, some may require additional procedures, medications, or even surgery.

**Taking care of your pet is a privilege and the honor of your trust matters to us. Please help us continue our excellent record of optimal outcomes and smooth recoveries!**
